

# **Tribal Child Support Enforcement Systems Workgroup March 29 and 30, 2004 - Milwaukee, Wisconsin**

## **FUTURE AGENDA ITEMS**

The following future agenda items are presented for planning, consideration, and discussion. It is the intent that the workgroup, at a minimum deliberate on the following agenda items during the course of the next three workgroup meetings. The agenda items to be discussed are:

- Identifying in more detail those areas of technical and program requirements, that at a minimum would be necessary to establish system specifications for a initial Tribal CSE System;
- Procurement and acquisition strategies;
- System operations and maintenance strategies;
- Staffing skill sets and resources for planning and developing tribal CSE systems;
- Data security, risk analysis and management, and backup and contingency planning; and,
- Model tribal systems: including current architectural, technical, administrative, operational and maintenance support capabilities, issues and requirements any new Tribal CSE system would need to address.

This list is not all-inclusive. Additional agenda items may be proposed, and by consensus, added to the workgroup's agenda for upcoming meetings. This includes the addition, if needed, of supplemental meetings beyond the four originally planned assemblies. It is important to note that the first future agenda item, " requirements specification " may require multiple meetings to fully satisfy.
