E Errors and Warnings

This appendix explains the possible errors identified by the FCR during the processing of input transactions. Appendix G, “Input Transactions,” describes the FCR input transaction layouts.

The FCR edits each transaction for critical and non-critical edits, rejects batches that fail critical edits, and returns the records with error codes. A submission may have more than one batch.

The FCR also returns warning codes and associated records when the FCR accepts a batch, but the record fails a non-critical edit. If a record has a combination of critical and non-critical edit failures, the system returns both error and warning codes.

For each edit, this appendix lists the error code, record type (for non-transmission errors), error message, and description. The errors are listed in alphanumeric order. Chart E-1 and Chart E-2 list the error code, error message, and description.

Batch transmission error codes are four positions; see Chart E-1. Transaction error codes are five positions; see Chart E-2 and Chart E-3.

The first position of the error or warning code is one of the following:

- 5 – Transmission level
- I – Data Inconsistency
- L – Locate
- P – Person
- Q – Query
- T – Transaction level

The second position of the code is:

- E – Error
- W – Warning

The second column of Chart E-2 includes codes to indicate the FCR input record type associated with the error code.

- FC – FCR Input Case record
- FP – FCR Input Person/Locate Request record
- FR – FCR Input Query record

Chart E-3 includes an explanation for the data inconsistency warning codes returned when you request the FCR Data Inconsistency file and there are inconsistencies among these elements on the FCR:

- Participant type
- Order indicator
- Date of birth
- Sex code
